```

## Notes

- "uid2" is the keyword used to store user id using shared preference
- In splash screen if uid2 is null page is redirected to loginscreen else homescreen
- During logout clear uid2
- For changing firebase add new google-service.json in android>app folder (for android)
- For ios add new googleService-Info.plist in runner
- For android keystore is available in android>app>keystore
- Change storeFile in key.properties(android)
